Databases and GUI

① CLI can be used to connect with our database and gives up great power and tools, but it is lacking visualization to some level and is a hassle if you just want to build something simple.

② That is where GUI apps for these Databases come in,

i) Easy visualisation.

ii) Don't have to write redundant code.

iii) faster (i.e in context of clicks vs typing queries)

③ for SQL famous GUI are <u>SQL Workbench</u>.
$$\qquad\qquad\qquad\qquad\qquad\text{<u>SQL yog</u>}.$$

for MongoDB a famous GUI is <u>Robo3T</u>.

Extra Notes

<u>Postman API</u> ⟶ for making requests without using frontend.

<u>Chaining API methods</u> ⟶ app.route() used.
