RESTful APIs.

① Restful → Representational State Transfer.
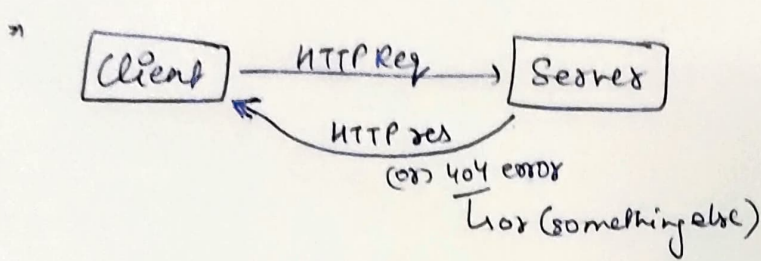

HTTPS → secure (crypto)
↳ Hyper Text Transfer Protocol
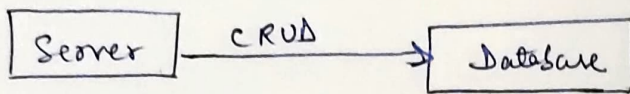

② ⟹ (If client ⟹ customer at restaurent, server → restaurent)

⟹ API are kind of a menu of things that server can serve to client.

③ ⟹ Restful API means creating an API in REST Architecture
∴ way of building menu.

Other examples → SOAP, GraphQL, etc.

④ ⟹ For making API in REST Architecture → **5** Constraints.

⟹ HTTP verbs → Get, Post, Put/Patch (specific), Delete.

Structure

```
app.<HTTP verb> ('function (req, res) {

                  ⟶ (Route) → eg → '/'

3);
```

⑤" (Poor) Equivalent.

    Creating ————————→ Post

    Read ————————→ Get

    Updating ————————→ Put / Patch

    Deleting ————————→ Delete

Note:- Take care of url and routes while developing
      Restful API.
